

1. Your meter will be swapped out for a new bi-directional meter
2. During the day when you're at work, or not home your system is still producing energy. That energy is sent back to the grid and stored for you to use at night time, or when the sun isn't out. At the end of the year that bank of energy is zero'd out and bought back by the utility company and sold to the neighborhood to reach their quote of clean energy.
